### Mixing valve for emergency shower and safety stations

The thermostatic mixing valve contains one thermostatic element in order to provide tempered water in the event of a thermostatic failure. The hot water shuts off in case of a cold water failure. But at a hot water failure, the cold water bypass ensures water for the emergency shower/safety station.

To ensure an even water flow, the hot and cold water inlet should be equal. Recommended temperature is 20-30° C.

#### TECHNICAL INFORMATION

Capacity: 120 L/min	Width: 180 mm
Water supply: DN 32	Height: 190 mm
	Depth: 100 mm
