

KND-SSE-900

Hygienic self-flushing module

The hygienic self-flushing module is ideal for ensuring regular and automatic flushing of the stagnant water in emergency showers and eye/ face-wash pipelines. The water system self-activates and flushes itself at set intervals for set durations, without requiring manual human intervention. This prevents stagnation of water in the pipes, and helps to prevent the growth of water-bound bacteria like Legionella that can cause serious health problems for the user.

This module can sit anywhere on the piping network between the shower's valve/ valves and customer's water inlet. The power is connected by means of plug-in power or for mains-independent solutions via battery.

KND-SSE-900 is a retrofitable solution, and can be applied to all brands of emergency showers, eye/ face washes, and other water supply systems like taps, etc.

As part of safety and maintenance, it is highly recommended to flush all emergency shower systems during regular maintenance. The KND-SSE-900 module automates this function.

Flow regulator 2.5 l/min, 6 l/min and 9 l/min included. Max. static pressure 8 bar.

TECHNICAL INFORMATION

Flow rate:	2.5/6/9 L/min	Width:	112 mm
Connection:	Thread G1/2B	Height:	113 mm
		Depth:	63 mm
